NATIONAL MARROW DONOR PROGRAM®

Washington University: Center Specific Analyses

Adults: Washington University School of Medicine

This analysis is based on transplants performed from Jan. 1, 2007 through Dec. 31, 2009 using unrelated donors and transplants performed from Jan. 1, 2008 through Dec. 31, 2009 using related donors. It only includes patients who underwent their first allogeneic transplant within these respective time periods and who had at least a 100-day follow-up.

1. This center reported survival status data for **332** adult patients.

2. The **actual one-year survival** of these patients is **56%**.

3. The **predicted one-year survival** was **59%** (with 95% statistical confidence that the predicted survival was between 54% and 64%.)

4. This center's **actual** results are **similar to** the **predicted** range for this center.

Pediatrics: St. Louis Children's Hospital

This analysis is based on transplants performed from Jan. 1, 2007 through Dec. 31, 2009 using unrelated donors and transplants performed from Jan. 1, 2008 through Dec. 31, 2009 using related donors. It only includes patients who underwent their first allogeneic transplant within these respective time periods and who had at least a 100-day follow-up.

1. This center reported survival status data for **34** pediatric patients.

2. The **actual one-year survival** of these patients is **79%**.

3. The **predicted one-year survival** was **78%** (with 95% statistical confidence that the predicted survival was between 64% and 91%.)

4. This center's **actual** results are **similar to** the **predicted** range for this center.
