Children's Healthcare of Atlanta at Egleston - Related

Survival by Patient's Age, Disease Type and Stage after Related Donor Transplantation

This report is based on first allogeneic transplants performed between January 2008 and December 2010 using related donors. It only includes patients with known survival status at one year post-transplant. In some cases, patients may have been alive at last reported follow-up that was less than one year - they have not been included in this report. The first number represents the number of patients alive at one year post transplant. The second number is a total number of transplanted patients in that particular group.

Diagnosis	0-9 Yrs	10-19 Yrs	20-29 Yrs	30-39 Yrs	40-49 Yrs	50-59 Yrs	60+ Yrs	Overall
Acute lymphoblastic leukemia in first complete remission	4/4	2/2	--	--	--	--	--	6/6
Acute lymphoblastic leukemia in second complete remission	0/2	1/1	--	--	--	--	--	1/3
Acute myelogenous leukemia in first complete remission	4/5	3/6	--	--	--	--	--	7/11
Acute myelogenous leukemia in second complete remission	1/1	1/1	--	--	--	--	--	2/2
Disorders of the immune system	1/1	1/1	--	--	--	--	--	2/2
Inherited abnormalities of erythrocyte differentiation or function	2/2	3/3	--	--	--	--	--	5/5
Myelodysplastic disorders - Other MDS	--	1/1	--	--	--	--	--	1/1
Non-Hodgkin lymphoma	--	1/1	--	--	--	--	--	1/1
Other leukemia	2/2	--	--	--	--	--	--	2/2
Severe aplastic anemia	2/2	2/2	--	--	--	--	--	4/4
Total	16/19	15/18	--	--	--	--	--	31/37
